***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 4/20/04 has been entered.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-21 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Gilby (6,239,871).

Gilby teaches of an optical analysis chamber comprising an optically transmissive elongated tubular body (112) having an interior and exterior surface wherein the interior surface of the tubular body is the exterior surface of the cell (116), wherein said interior surface wall defines an elongate separation chamber that is in

direct contact with a sample material, said body wall having a window (100) having a substantially convex exterior surface wherein said window has a non uniform thickness (figure 2A) and wherein the longitudinal axis of the sample passageway is offset from the tubular body.

### ***Response to Arguments***

Applicant's arguments filed 4/20/04 have been fully considered but they are not persuasive. Applicant argues that the limitation of the interior surface of the separation chamber being in direct contact with a sample material being separated is not taught in the Gilby reference. Examiner respectfully disagrees since the claims can be interpreted as the tubular body (112) having an interior and exterior surface wherein the interior surface of the body (112) is the same as the exterior surface of the cell (116), which is in contact with the material.

### ***Conclusion***
